## Frequency map of the Rh Negative Blood Group factor

(based on Mourant et al. 1976, from Sykes & Renfrew 2000)

# A MUST READ If You Have Rh-

# Negative Blood

## The Mystery of Rh-Negative Blood—Genetic Origin Unknown

### BLOOD GROUPS – General Overview

Posted by Nella Adriana Čorak-Šebetić

Nearly 85% of all human beings have RH positive blood. Which merely indicates that their red blood cells contain a substance called the RHesus (rhesus)

blood factor. Simply put, their positive blood contains a protein that can be linked to the Rhesus monkey. It is acknowledged that blood factors are transmitted with more exactitude than any other human or animal characteristic. It is not generally known from where the negative RH factor derived, although tantalizing evidence exists that it arrises from genetic experimentation a little over 5,000 years ago.

The highest concentration of RH negative blood occurs in the Basque people of Northern Spain and Southern France, and in the Eastern/Oriental Jews. Only 15% of the entire world's population is known to have the RH negative blood factor. While it is known that RH negative blood – (type 'O') is the purest blood known to mankind, it is not known from where the negative factor originates, as it is generally theorized by evolutionists that there is an unbroken bloodline from early human prototypes (pre-humans)

to present day human beings.

As previously mentioned, 'Rh negative' blood indicates no protein connections exist to the Rhesus monkey, whereas 'RH positive' blood does carry protein linked to the Rhesus monkey – hence the 'RH' designation, ie. rhesus. All other earthly primates have this RH factor. Thus if all humans evolved from that line, all would have the RH factor. Obviously, that is not the case. Therefore, there must have been some manner of intervention giving rise to Rh-negative blood groups.

Blood type 'O' is the most common of the blood groups. When we separate the 'O' types into 'negative' and 'positive' we find that 'O' negative (the universal donor blood) constitutes less than 7% of the world's population. Science at this very

time is attempting to create a synthetic RH negative 'O' blood, but without success. For while the protein in positive blood can be cloned, that of negative blood cannot – which is quite interesting, and may be indicative of an alien origin, or more probable, from early genetic experimentation during previous advanced human civilization(s).

If the RH negative factor does not derive from any known earthly link (seemingly outside of the theorized evolutionary process) – from where did it originate? Geneticists generally claim the RH-negative factor is a mutation of unknown origin which apparently happened only a few thousand years ago. These 'negative' blooded people spread heavily into the area of what is now Spain, England, Ireland, France and later into America, Canada and Australia. Basque peoples contain the largest concentration of

known 'O' negative blooded people today because, they for the most part, have confined themselves to one area, whereas the Celtic people have branched out among all of the new world.

## WHAT DOES THE ABSENCE OF RHESUS MONKEY FACTOR MEAN?

No solid scientific explanation exists as to how or why Rh- blood came about. It is presumed to be the result of a random mutation. Have you ever felt you were weird or different? It may be due to your DNA ... 85% of humans have the monkey gene (RH+) and 15% do not (RH-) and maybe have an alien gene instead. RH- people are characterized by higher IQs, sensitive vision, lower body temperatures, sensitivity to heat and sunlight, psychic power, ability to stop watches and electrical appliances and having extra vertebrae. This film explores the possibility that we were bred as a slave race for labor, since 97% of our genetic code is disabled, with only 3% left for us to survive.

## RH NEGATIVE BLOOD

Interestingly, popular sciences endeavor to attribute Rh-neg blood groups to "mutations." A solid alternative case may be extended to the conclusion that Rh-neg is NOT a mutation, but possibly the original human blood group. This, however, does not reflect tenured thought, and thus has never been adequately researched.

That there was a group of "pure" humans, not directly related to the evolutionary processes on Earth, is a distinct possibility. This reasoning would suggest that the original humans on our planet

where not directly related to the apes, but at some point were “MADE” or “genetically engineered” to give such impression.

Perhaps it was never intended that the Rh-positives become the dominant species. That through some as yet undetermined epoch, the genetically impure group gradually became the controlling species, except for several remote enclaves, initiated a wide-ranging genocidal pogrom, effectively wiping out those who gave birth to them.

All of which begs the questions: What reasons were the sub-species created, what was the process of conquest, what was the duration, and does it continue?

## BLOOD TYPES CONSPIRACY & RH FACTOR

### Items from the Science Community

Here are a few tidbits about this blood thing. In ALL blood groups there exists a common microbe that in essence is THE LIFE FORCE ITSELF. During experiments that our team conducted we heated the blood to 700 degrees F and also put it in Liquid Nitrogen. This microbe which is visible only with a highly modified dark field microscope that was custom built for us was STILL ALIVE. We have also tested this on ‘mummy dust’. This microbe is STILL alive after 5000 years plus when the mummy dust is placed in a ph perfect solution the same as the “live blood”, it returns back to ‘life’.

The Draco (Reptilian) with the “O” RH-blood has unique properties because of the polarity of the blood cells. Blood is electrically/magnetic/chemical based. The relationship of all three

must be kept at a specific PH balance of 7.0 to 7.2. The problem with the “O” RH-systems is this, the stomach has TOO MUCH acid in it for proper digestion so they had to resort to taking the trace mineral in THRU THE SKIN aka ‘sitting in a bath tub full of minerals’.

Then after generations of this type of eating the digestive systems ceased to function properly. This is why Type “O” blood groups have so much trouble with ‘indigestion’. It’s in your genes because of this Draco influence. I am currently putting together a geographical reference to the placement of just how many people carries this genetic code in their blood.

#### DO NOT EVER TAKE A BLOOD TRANSFUSION.

The main reason for this has to do with cellular/genetic/galactic memory of blood. This is coded into the entire structure of the blood. All the emotions that the donor has felt during his entire lifetime are part of the blood. This cannot be filtered out. For example if you get a heart of a man who died in a car accident, all the cells of that organ have the memory of the accident and every emotion that was felt while dying. These emotions confuse your own coding and then mass internal confusion happens at the cellular level and the order turns into chaos. No shrink at \$100 per hour is gonna fix that, ever.

Many “O” RH-negative people on the planet are also holding karma from the Draco Empire. Some of you have chosen to come to earth to help balance that karma. Some who were “O” RH-negative have switched to “A” RH positive which is the TOTAL OPPOSITE to “O” RH-neg.

Our world-wide team, over a 10-year time period have gathered hundreds of thousands of blood samples. We are only now beginning to understand what is happening to humans, as indicated by blood-types, as Earth nears Nexus.

Those having the hardest time being the “O” Rh- blood groups with alien (to Earth) heritage. I cannot reveal at this time just how this is done but I can say this, we are at a crossroads as far as our ability to affect our OUTER world by changing the INNER world of the blood. Every ‘disease’ is nothing more than a reflection of the INNER terrain of the blood. As the blood is intimately integrated with the life force, this explains the feeling that we have when working with people that have the same blood type.

To answer the questions that I am sure will come up, The book Eat Right For Your Blood Type is correct only in the foods, but he does not take into consideration the GALACTIC history of the blood in relationship to the person. That is what I have been working on. As far as his history as to how the different blood groups came about is pure hogwash. The different blood groups are from different parts of the Galaxy. More of this is going to be revealed as more understanding of REAL RNA/DNA Coding is researched.

When you measure the heart harmonics of people with “O” RH-neg blood, they are usually lower if they are smokers and heavy red meat eaters. The ones who eat fish and vegetables are in the normal range. This is a very new science and there are but a handful of people who are involved in this research.

Here is something for all of you to think about:

There is a race of people in a remote region of China that are only 3 – 4 feet tall and speak a language spoken only within that remote area. When they try to move from this region to lower geological elevations, THEY DIE. Their skin colour is ashy white. Their eyes are very small almost like slits.

## THE pH REGULATORY SYSTEM OF THE BODY

The pH balance of the human bloodstream is recognized by all medical physiology texts as one of the most important biochemical balances in all of human body chemistry.

pH is the acronym for “Potential Hydrogen”. In definition, it is the degree of concentration of hydrogen ions in a substance or solution. It is measured on a logarithmic scale from 0 to 14. Higher numbers means a substance is more alkaline in nature and there is a greater potential for absorbing more hydrogen ions. Lower numbers indicate more acidity with less potential for absorbing hydrogen ions.

Our body pH is very important because pH controls the speed of our body’s biochemical reactions. It does this by controlling the speed of enzyme activity as well as the speed that electricity moves through our body.

The higher (more alkaline) the pH of a substance or solution, the more electrical resistance that substance or solution holds. Therefore, electricity travels slower with higher pH. All biochemical reactions and electrical (life) energy is under pH control.

If we say something has an acid pH, we are saying it is hot and fast. As an example, look at the battery of your car. It’s an acid battery. On cold days you want it to be hot and ready, and you want your car to start fast.

Alkaline pH on the other hand, biochemically speaking, is slow and cool. Compare it to an alkaline battery in a flashlight. You want that battery to be cool, and to burn out slowly. Here is an example of how pH can control. Look around you at society in general.

Do you see people getting exhausted, burned out, and quick to anger? Do you see a rise in violence? In part it could be due to the fact that people today lean to an acid pH. As a society we are running hot and fast. How did we get there? We guzzle coffee for breakfast.

There are about 5000 known blood factors, and all of these must contribute to the complete picture. But the Rh negative blood is the place to start our search.

Population	Rh(D) Neg	Rh(D) Pos	Rh(D) Neg alleles
European Basque	approx 35% [citation needed]	65%	approx 60%
other Europeans	16%	84%	40%
African American	approx 7%	93%	approx 26%
Native Americans	approx 1%	99%	approx 10%
African descent	less 1%	over 99%	3%
Asian	less 1%	over 99%	1%

As you can see the vast majority of RH- people come from the Basque people of France and Spain, and then Europe has the second highest percentage. We can surmise that the RH- blood type originates out of Europe and has spread over to other countries that contain European ancestry heritage. The RH- recessive alleles (+/-) make up approximately 60% of the Basque people and 40% of the Europeans, so that means that a higher percentage of RH+ people in Europe are carrying the genetics of the RH- factor in their DNA.

“No one has tried to explain where the Rh negative people came from. Most, familiar with blood factors, admit that these people must at least be a mutation if not descendants of a different ancestor. If we are a mutation, what caused the mutation? Why does it continue with the exact characteristics? Why does it so violently reject the Rh factor, if it was in their own ancestry? Who was this ancestor? Difficulties in determining ethnology are largely overcome by the use of blood group data, for they are a single gene characteristic and not affected by the environment.

The Basque people of Spain and France have the highest percentage of Rh negative blood. About 30% have (rr) Rh negative and about 60% carry one (r) negative gene. The average among most people is only 15%-Rh negative, while some groups have very little. The Oriental Jews of Israel, also have a high percent Rh negative, although most other Oriental people have only about 1% Rh negative. The Samaritans and the Black Cochin Jew also have a high percentage of Rh negative blood, although again the Rh negative blood is rare among most black people.

The Basque people are also known for having the oldest language

in Europe, and the origins of the Basque language are unknown. The languages in neighboring countries in Europe show no resemblance to the Basque language, so this has become a real mystery to the linguist.

The Celtic people of Ireland and Great Britain also have high incidences of the RH- factor and it has recently been proven that there is a genetic link between the Basque and the Celts. This research proves that the Celtic people came from the Basque regions of France and Spain and a group must have migrated over to the islands of Great Britain.

Here are a few “fun” facts shared by many within the Rhesus negative groups:

- A feeling of not belonging
- Truth seekers
- Sense of a “Mission” in life
- Empathy & Compassion for Mankind
- An extra rib or vertebra.
- Higher than average IQ
- ESP Ability
- Love of Space & Science
- More sensitive vision & other senses.
- Increased of psychic/intuitive abilities
- Cannot be cloned
- Lower body temperature
- Higher blood pressure (some say lower either way one extreme to another never quite right)
- Predominance of green or hazel eyes that change color
- Red or reddish tint to hair color

- Increased sensitivity to heat & sunlight
- Unexplained Scares
- Piercing Eyes
- Tend to be Healers
- Empathetic Illnesses
- Ability to disrupt electrical devices
- Prone to Alien Abductions
- Experience unexplained phenomenon
- Physic Dreams and/or Ability

## “ROYAL DISEASE”

Global Blood suppliers managed to infect or kill 90% of Hemophiliacs in world by providing them with tainted blood. If Hemophiliac is the “Royal Disease”, woe to generations of boys, who could not be king. Worldwide, over 120,000 men, women and boys...a true “genetic holocaust”...are now infected with HIV world wide...due to tainted blood transfusions At least 25,000 have died.

In some areas, the Rh-Negative blood factor is referred to as “Blood Royale” or “Royal Blood”. For centuries, European royalty have been inflicted with Hemophilia or “bleeders disease”. Apparently, Queen Victoria was a “carrier” of Hemophilia and gave it to all of her children who then intermarried and infected the bloodlines of very throne in Europe during the 1800s and 1900s.

As a direct result, Hemophilia became known as the “Royal Disease”. To keep this in perspective, only about 5% of all “royalty” have Rh-Factor negative blood...which means “less than the general population. That would indicate that the vast majority of “rulers” and “monarchs” are NOT Rhesus-factor negative. Is this by chance? or by genetic engineering called “arranged marriages”?

For all practical purposes the cultural group with the highest rates of Rh-negative blood are the “Berbers” of Morocco. In an earlier meme, i indicated that the highest concentration of Rh-Factor Negative was from Iraq. It seems that the Berbers may actually have originated thousands of years ago, from the border of Syria and Iraq.

If European royalty are no disposed to intermarriage with Rh-Negs, it may be because they are avoiding the “arab” bloodline? Let’s not get ahead of ourselves. It appears that the Basque Rh-neg factors come from ancient Berber sea farers as early as 8,000 BC! Perhaps, many of the “cave paintings” may be attributed to “strangers” of great artistic ability that migrated into the area.

Is “hyper-creativity” a “symptom” of Rh-Negative Blood? Artists? Entertainers? Who knows...but if European Royalty refuse to marry into the Rh Negative blood line it means one thing...Rh-Neg people are a “competing royal line”.

How do you get rid of it once and for all? Although the British would love for you to think that Victoria was the world’s first carrier...don’t be confused. It was he Hapsburg’s disease. Was Victoria a Hapsburg?

The unofficial motto of the Hapsburg family was “Bella gerunt alii, tu, felix Austria, nubes!” (“Where others must fight wars, you, fortunate Austria, marry!).

It’s curious that “marriage” can be a “dynastic” undertaking but it can also be a perverse form of “bio-warfare” or “genetic warfare”. In fact, the disease was much more ancient.

The “Father of Surgery” was El Zarhawi or Albucasis, 1013-1106. Albucasis described a family where only males died from blood loss after the most trivial of injury.

<http://www.unhas.ac.id/~rhiza/saintis/zahravi.html>

Abu Al-Qasim Al-Zahravi  
(Albucasis)

His full name was Abul Qasim Khalaf ibn al-Abbas al-Zahravi. He was born and brought up in Zahra (zorro?) , the royal suburb of Cordova (Arabic Qurtuba), the capital of Muslim Spain. As we know from the history, Zahra competed in grandeur and magnificence with Baghdad. Al-Zahravi

served in the capacity of the court physician to King Al-Hakam-II of Spain. After a long and distinguished medical career he died in 1013 C.E.

As an inventor of many surgical instruments, Al-Zahravi is famous for developing instruments for internal examination of the ear, internal inspection of the urethra and for applying or removing foreign bodies from the throat. He introduced such new procedures as cauterization of wounds, crushing stones inside the bladder, the vivisection and dissection.

He applied cauterization procedure to as many as 50 different operations. In addition, Al-Zahravi discussed the preparation of medicines and the application of such techniques as sublimation and decantation. He prescribed the use of diuretics, sudorifics, purgatives, the absorption of pure wine and hot baths. Al-Zahravi was the first to give detailed description hemophilia and was the first to use silk thread for stitching wounds.

So, you begin to wonder if the good doctor was treating an “Arab” family in Moorish Spain for the disease. Then you begin to wonder just where a supposed blue blood like Victoria got her “Arab Royalty Disease”??? Was it a disease of Spanish Royalty?

In other words, was marriage to Victoria’s daughters a way to kill or weaken future “non-Hapsburg” kings...since mostly males only contract the disease from their mothers? Still, Hemophilia was in Royalty long before Victoria.

Victoria’s daughters passed the disease into the Spanish, German and Russian Royal lines and threatened the thrones of all of Europe’s major powers. It would appear that Victoria is actually a direct descendant of Ferdinand of Castille, who retook the city of Castille in 1236, where the surgeon Abulcasis had counseled King Hakam II about a family whose sons died easily.

## SOME CRAZY STUFF FOLKS!

Just want to raise awareness and give a heads up to people out there that might know someone experiencing strange SYMPTOMS or have heard about this. I highly recommend familiarizing yourself with this as a precaution so you can RECOGNIZE it when you hear

about it or experience it because awareness is the first way to fight the scumbags that created this or apart of what seems to be nefarious... however this entire issue and origin is still unknown as to whether its intended to have a positive or negative effect in the bigger picture. Is this a non-fictional XMEN type of evolutionary virus or a hoax... no one knows, but there does seem to be strange sh#t going on with all this more than anyone realizes right now. BE VIGILANT because KNOWLEDGE is POWER.

Evidently one of the possible anomalies or diseases that might be connected is called MORGELLONS DISEASE which are technically micro-BUGS that are ELECTRICAL...

But it appears to allegedly be some type of a NANO-TECH Virus that affects those with RH NEGATIVE BLOOD and is said to be ALIEN in origin or MILITARY TECH virus/disease of some kind THEY'VE introduced many years ago into the human population possibly VIA CHEM TRAILS or that CHEMTRAILS are somehow also an ACTIVATOR of it.... and seeing how there's more and more chemtrails these days, this may be ALL CONNECTED and one of the purpose of CHEM TRAILS are intended for.

It may be a method of DEPOPULATION beginning with infecting those GRADUALLY who are RH NEGATIVE.

Could this be linked to MASS ANIMAL DEATHS as well in any way?

**Most do not know that as RHO-Neg individuals, they are tracked throughout their whole lives by world-wide governmental agencies interested in understanding the genesis of this group, and for other more complex societal purposes. (follow this line of thought in the new material to be posted as a continuation of**

## Journey to the Absolute Elsewhere)

### FAMOUS PERSONALITIES:

- i. **Nikola Tesla** A Croatian scientist most famous for his work on alternating current, the induction motor, the Tesla coil, etc. I2a-Din-S L147.2+
- ii. **Douglas-Hamilton** This line includes the **Dukes of Hamilton** and **Earls of Selkirk**. Their most famous representative is perhaps **Douglas Douglas-Hamilton, 14th Duke of Hamilton**, a Scottish nobleman famous for becoming the chief pilot of the first flight over Mount Everest, as well as for his later involvement with Rudolf Hess. Some other famous Douglas-Hamiltons include mummification and art enthusiast **Alexander Hamilton, 10th Duke of Hamilton** and the politically influential **James Hamilton, 4th Duke of Hamilton**. Furthermore, the family claims descent from the **Earls of Angus**, although some competing claimants have tested differently. A relative of this family tested at the **Hamilton Surname DNA Project**. I2-M223-Isles-E L1193+
- iii. **Douglass** Earls of Angus I2a2a
- iv. **Royal House of Stuart** The **House of Stewart** (latterly gallicised to **Stuart**), is a European **royal house**. Founded by **Robert II of Scotland**, the Stewarts first became monarchs of the **Kingdom of Scotland** during the late 14th century, and subsequently held the position of the Kings of England, Ireland, and Great Britain. I2a2a
- v. **Sir Henry Clinton** 1730-1795, British general, one of the major participants in the war for American independence from the British side, belonged to haplogroup I2a2 M223 L1193

vi. **Davy Crockett** 1786-1836, American politician and adventurer with a Wild West belonged to haplogroup M223 Z76

vii. **William Wallace** (? -1305), a Scottish fighter for independence as a member of Clan Wallace probably belonged to haplogroup I2c L59
